AUTOMATE YOUR BUSINESS

e-BRIDGE Capture & Store from TOSHIBA can transform your paper-based filing systems into electronic document workflows.

By bridging the gap between paper documents, scanned images and information management systems, Capture & Store converts paper into pixels, with seamless integration into existing file servers, document systems and office equipment.

Automating paper-based processes has never been easier. Document capture workflows are created on your central server with a visual drag-and-drop designer and automatically deployed to all authorised scanning clients, ensuring that all your scan-capable devices are ready to start integrating paper-based information to your digital workflows.

And with a range of scanning clients, just about any scan-enabled device can be transformed into a powerful document automation engine, with Capture & Store.

Crossing the digital divide

e-BRIDGE Capture & Store enables you to integrate your paper documents into your information workflow by converting scanned files into searchable, digital files, improving users' productivity.

Compatible with many models of desktop scanners and multifunctional devices, Capture & Store enables users to access one-touch scanning workflows that can capture all types of paper documents and distribute the data via email, file servers and document management systems. Capture & Store can also automate business processes by extracting data contained in barcodes, document zones and marks and automatically feeding it into business systems, cloud storage services, databases and finance applications.

The logo for TOGETHER INFORMATION features the word 'TOGETHER' in white inside a red shape, with the word 'INFORMATION' in red below it.

TRANSFORMING PAPER INTO PIXELS

By connecting directly with document systems and file servers, Capture & Store helps you to capture paper documents directly into the heart of your business. Users interact with scanning workflows via an attractive, simple, one-touch interface from the panel of many popular multifunctional devices, or via the PC-based desktop, which defines the processing steps and storage settings for the document type workflows.

Ideal for companies looking to maximise their investment in local or cloud-based file storage infrastructure, e-BRIDGE Capture & Store delivers all the essential functionality you'll require as standard without the need to purchase expensive add-on modules. Everything you need to begin building smart document capture workflows is included.

At the core is a high-performance, full-page OCR engine, capable of quickly recognising and converting scanned documents to a multitude of searchable formats. Once converted, you can easily send and store your documents using any number of standard or optional system connectors.

And with advanced options such as optical marks recognition (OMR), image enhancement, document redaction, advanced bi-tonal compression and dozens of document system connectors, Capture & Store is fully equipped to streamline any paper-based business workflow.

Multi-function device workflow panel

Easy-to-Use Workflow Designer

- > Various brands of multifunctional devices
- > TWAIN-enabled scanning device
- > Capture electronic documents from email, FTP servers and file system directories
- > Image enhancement and correction
- > Full-page OCR, Zone OCR, OMR and MICR support
- > Barcode recognition and annotation (1D/2D)
- > Document annotation and redaction
- > Intelligent character (handwriting) recognition
- > Automatic image-based document classification
- > Supports single sign-on from Active Directory
- > System connector library
- > Advanced workflow events and trigger system
- > Enterprise load-balancer for high-volume throughput
